

A Safe, Effective & Durable Treatment For Patients With Mechanical Chronic Low Back Pain.

TREAT THE CAUSE, NOT JUST THE SYMPTOMS

ReActiv8 is designed to overcome neural inhibition and allows the body to regain control of the multifidus, providing functional lumbar stability and reducing mechanically based pain.

NICE guidance published 22nd September 2022 | Full NHS use with below recommendations:

- Patient selection done by **MDT with experience in pain management and neuromodulation procedures**
- **Inform clinical governance** in hospitals
- **Audit and Review** clinical outcomes
- Hospitals to enter **ReActiv8 patients into the NNR**
- **ReActiv8 fully covered by NHS England** in the same way as SCS through the High Cost Tariff Exempt Devices model

Patients experience progressive long-term improvements in pain and function over time, indicating durable, consistent, and restorative outcomes. There is no other device for Mechanical Chronic Low Back Pain that can demonstrate this.
